Springer. Paperback. Book Condition: New. Paperback. 292 pages. Dimensions: 9.1in. x 6.1in. x 0.7in. AdHoc Networks are wireless, self-organizing systems formed by co-operating nodes, within communication range of each other which form temporary networks. Their topology is dynamic, decentralized, and ever-changing, and the nodes may move around arbitrarily. The last few years have witnessed a wealth

of research ideas on AdHoc networks which are moving rapidly into implemented standards. Mobile computing, particularly wireless-enabled mobile computing, covers a large area of applications in mobile computing environments, networking, communication devices and systems.

This conference exposes experimental as well as theoretical research in adhoc, mobile and wireless networks. The range of topics covered includes management of power consumption, architectures and protocols, quality of service, and security. The aim of the conference was to provide a unique opportunity for researchers and students in industry and academia to participate at an annual forum and share their research results and experiences. This conference followed the first successful conference (held at the Fields Institute in Toronto during September 2001 of last year), and was held at the Holiday Inn, Midtown in Montreal during October 8-10, 2003. It was co-sponsored by the Mobile Computing and Networking Research Laboratory (LARIM) of the Ecole Polytechnique de Montreal, the School of Computer Science (SCS)

Reviews

An extremely wonderful ebook with lucid and perfect explanations. I was able to comprehend almost everything using this composed publication. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- Kimberly Carroll

It is one of the best publications. It is definitely simplistic but excitement in the 50% in the ebook. I am very happy to let you know that this is basically the greatest publication I have got to go through within my own existence and could be the greatest pdf for ever.
