Book Condition: New. Publisher/Verlag: Springer, Berlin | The Proceedings of the Twenty-First Annual Convention and Scientific Program of the Society of Biological Psychiatry, Washington, D. C., June 10-12, 1966 | Qualitative evaluations of buccal smear specimens have indicated an unusually high incidence of triple-X females in a hospitalized schizo phrenic population. Specimens from adult prisoners have also indicated an unusually high incidence of triple-X females. Studies of a population of confined juvenile offenders, on the other hand, have indicated an unusually high incidence of one-X females. No unusual indications were observed in a population of "normal" volunteer females. The data and their implications are discussed in context with previous observations. ACKNOWLEDGMENTS This study was made possible primarily by research grants from the Scottish Rite Committee on Research in Schizophrenia, The National Association for Mental Health, Inc.
